$$2x + 3y = 6$$

In this equation, x and y are the variables, while 2 and 3 are their respective coefficients. The constant term on the right side, 6, represents the value the expression must equal. This equation can be interpreted graphically as a straight line in the Cartesian plane

$$4x + 5 = 9$$

To solve for x, subtract 5 from both sides of the equation, then divide by 4 to isolate x, yielding x = 1.
